

Repository Analysis Report

for [simple-social-networ...](#)

- Repository Name: [simple-social-ne...](#)
- Owner: [DRMPN](#)
- Created at: 23.02.2023 09:19

Statistics	Values
Stars Count	1
Forks Count	1
Issues Count	0

Metric	Values
README Presence	✓
License Presence	X
Documentation Presence	X
Examples Presence	X
Requirements Presence	✓
Tests Presence	X
Description Presence	X

Repository Structure:

- Compliance: The repository structure is straightforward, with a clear separation of application code (src), templates, and static assets. Essential files like docker-compose.yaml and Dockerfile indicate containerization support. The presence of a requirements.txt file is good for dependency management.
- Missing files: LICENSE, tests
- Organization: The repository is well-organized for a simple project. The 'src' directory contains the core application logic, and 'templates' and 'static' are appropriately nested within it. The root level contains configuration and setup files.

README Analysis:

- Quality: The README provides a good overview of the project's purpose and features, including visual aids. It clearly explains what the 'Simple social network' does and how it stores data. However, it lacks crucial sections like installation instructions, usage examples, and contribution guidelines.
- Project description: Yes
- Installation: No
- Usage examples: No
- Contribution guidelines: No
- License specified: No
- Badges present: No

Documentation:

- Tests present: No
- Documentation quality: Documentation is limited to the README.md file. While the README effectively describes the project's features and database schema, it lacks detailed instructions for setup, usage, or development. There are no dedicated documentation files or directories.
- Outdated content: No

Key Shortcomings:

- Lack of a LICENSE file, which is crucial for defining usage rights and permissions.
- Absence of installation instructions in the README, making it difficult for new users to set up the project.
- No tests directory or test files, indicating a lack of automated testing for the application's functionality.

- Missing contribution guidelines, which can hinder community involvement and collaboration.

Recommendations:

- Add a LICENSE file to specify the terms under which the project can be used, distributed, and modified.
- Include detailed installation and setup instructions in the README.md, covering dependencies, environment setup, and how to run the application.
- Implement automated tests for the application's core functionalities to ensure reliability and facilitate future development.
